

# ETI INTERCONNECTS

## **ETI eXpress 4 INTERCONNECT SERIES 2**

This is where it all starts.

***The eXpress 4 interconnect comes factory terminated with and is optimised for tellurium copper BulletPlugs®.***

That said, it offers a level of sound quality and transparency that simply must be heard to be believed. Inner detail, nuance, and emotion are conveyed with remarkable fluidity.

The eXpress 4 employs the Eichmann Ratio™, a patented formula that together with a precisely aligned Litz wire configuration results in performance that will satisfy the most demanding listener. This ratio of conductor and return diameters is the result of countless hours of listening, and features carefully positioned OFC conductors and larger diameter return wires—a total of four lengths of high purity solid core copper. Designer Keith Eichmann theorises that this 'ratio' forces the larger return wire to respond rapidly to signals being transmitted through the conductor, and at the same time it provides control of reactance between signal and return. It is nonetheless audible.

## **ETI eXpress 6 INTERCONNECT SERIES 2**

***For those who demand the very best, ETI offers the eXpress 6—a genuine high-end, high performance interconnect that delivers music with breathtaking realism.***

As with the eXpress 4, the eXpress 6 utilises the Eichmann Ratio™, in this case with six lengths of precisely aligned solid core OFC, larger diameter return wires, and a precise Litz conductor configuration. Factory terminated with pure silver or tellurium copper BulletPlugs®, the eXpress 6 is also available with balanced XLR connectors.

The result is a sense of 'being there'—a relaxed, natural and focused musical presentation; one that places the eXpress 6 truly in a premium class.

Both the eXpress 4 and eXpress 6 interconnects feature high purity oxygen free copper and Teflon FEP insulation.
