

ETI SPEAKER CABLES

ETI eXpress 2 SPEAKER CABLE SERIES 2

For applications where maximum resolution and long runs are required, ETI offers the eXpress 2 as the ideal solution.

Employing the patented Eichmann Ratio™, where the return is larger in diameter than the signal conductor, the eXpress 2 delivers music with weight and authority.

It uses highly conductive Oxygen Free Copper (OFC), solid core technology, and houses its conductors in high quality foamed PE insulation.

The eXpress 2 is shipped in 50 meter spools, and can easily be cut to size and terminated.

ETI eXpress 4 SPEAKER CABLE SERIES 2

The eXpress 4 speaker cable uses the same technology as the matching eXpress 4 interconnect, but with increased mass to accept high current amplifier to speaker signals.

The cable incorporates the Eichmann Ratio™ formula together with Litz construction to reproduce music's subtleties with honesty and detail. Nuance and musical shading are rendered with astounding clarity.

The eXpress 4 speaker cable provides a clean, open sound with bass extension of real power and depth.

There is an unmistakable sense of an "untangling" of complex musical passages within a three dimensional sound stage.

Available with high quality spade or Bayonet Plug termination, the eXpress 4 features Oxygen Free Copper (OFC) conductors, solid core technology, and FEP Teflon insulation.
